SUMMARY

Early career software engineer with hands on experience building multi agent orchestration systems and retrieval augmented generation pipelines end to end in Python and TypeScript, from framing ambiguous asks directly with users into shipped APIs, agent tooling, and cloud deployments, eager to bring high ownership and fast iteration to an AI native, fast paced platform engineering team.

EXPERIENCE

Marketeq (AI Consulting)

San Jose, CA

Gen AI Software Development Engineer Intern

Jun. 2026 – Present

- Designed and built a multi agent orchestration framework in Python using LangGraph and asyncio, coordinating planner, writer, and formatter agents through Model Context Protocol tool calls and shared context state to turn a single content brief into publish ready social posts end to end.
- Implemented checkpoint based crash recovery and structured audit trail logging across the agent pipeline, persisting per agent outputs so a failed run resumes from its last completed stage instead of restarting the sequence, **cutting reprocessing time by 41%**.
- Prompt engineered grounding checks and anti-hallucination guardrails that validate each draft against sourced brand and product context before advancing to the next agent, **reducing factual correction requests from the marketing team by 57%**.
- Provisioned the pipeline's AWS infrastructure with Terraform and shipped it through GitHub Actions CI/CD, adding CloudWatch based observability dashboards that **took the system from prototype to production support for 30+ weekly content requests**.

EastSolve | https://pet-agent.eastsolve.com

San Jose, CA

Gen AI Software Development Engineer Intern

Dec. 2025 – May 2026

- Owned the pet health record web app end to end, building the front end in Next.js and TypeScript on top of a FastAPI backend, working directly with the founding team to turn ambiguous product asks into a shipped feature set.
- Built a RAG pipeline over FDA and CDC data sources, chunking regulatory documents and embedding them into a pgvector store, combined with SQL augmented retrieval across an event entity knowledge graph modeled in Neo4j.
- Added a hybrid search layer that merges vector similarity results with keyword filtered SQL queries and reranks candidates with a cross encoder, **raising top 5 retrieval precision from 71% to 89%** on a held out set of veterinary FAQ queries.
- Instrumented the pipeline with retrieval evaluation dashboards tracking recall and precision per data source ahead of each deploy, **cutting hallucinated recommendation responses by 34%** across a regression test suite.

eKutir (Global agri-tech SaaS platform)

San Jose, CA

Gen AI Software Development Engineer Intern

Jul. 2025 – Nov. 2025

- Owned the design of contract lifecycle workflows connecting smallholder farmer agreements to buyer commitments, building REST APIs and an event driven state machine that tracks each contract through draft, approval, and fulfillment stages.
- Built ETL pipelines syncing contract and fulfillment data from field partner systems into a central Postgres warehouse through scheduled batch and webhook driven ingestion, **processing 5K+ contract records weekly** with schema validation and dead letter queues catching malformed records.
- Added structured audit logging and retry with backoff on downstream partner API calls, **cutting failed contract sync incidents by 45%** during a multi region rollout.

OPEN SOURCE CONTRIBUTION/PROJECTS

Open Source Contribution · https://github.com/promptfoo/promptfoo/pull/10937

- Fixed a Langfuse integration bug in Promptfoo** that caused `--env-file` and config-level environment settings to be ignored, moving credential and host resolution from import time to fetch time with client reinitialization on configuration changes; added regression and end-to-end tests, and **merged the fix upstream into the open-source project** (PR #10937).

Multi-Agent Vision QA Pipeline · Santa Clara University, MVP Lab

Apr. 2025 – Jun. 2025

- Built a LangGraph and Claude Vision batch pipeline with an automated quality-check feedback loop that resubmits rejected images with the failing criterion attached, raising acceptance rate to 96% without human review.

EDUCATION

Santa Clara University, MS in Computer Science

Sep. 2024 – Jun. 2026

The University of British Columbia, BS in Mathematics

Sep. 2019 – Jun. 2023

SKILLS

AI & Agentic Systems: Model Context Protocol (MCP), LangGraph, agent orchestration, multi-agent orchestration, tool calling, large language models and inference APIs (Claude, OpenAI, Gemini), retrieval systems (hybrid search, reranking), vector search, embeddings, knowledge graphs (Neo4j, LightRAG), Claude Agent SDK, machine learning, prompt engineering, context engineering, Cursor, Claude Code, agentic coding

Backend & Web: REST APIs, React, Next.js, FastAPI, Node.js, OAuth, SSO, RBAC, webhooks, Django, Spring Boot, GraphQL, gRPC, HTML5, CSS3, ES6+

Cloud & Platform: AWS (S3, SQS, Lambda, SNS, RDS, CloudWatch), microservices, distributed systems, event-driven architectures, scalable architectures, GCP, Docker, Terraform, Kubernetes, Prometheus, Grafana

Languages: Python, TypeScript, JavaScript, Java, SQL, C/C++

Databases: PostgreSQL, MongoDB, Redis/ElastiCache, vector stores (pgvector, Pinecone), Neo4j

Data & Pipelines: SQL, ETL/ELT, data ingestion and synchronization, unstructured data processing, API and webhook integration, data modeling, relational schema design, batch and event-driven ingestion, data quality validation, schema validation, dead-letter queues

Practices & Tooling: Git, GitHub Actions CI/CD, code review, pytest, Linux, Bash, retries and backoff, dead-letter queues
